

# Invitation MCFV and CAFESMINAR

## "Current state of AI technologies & their impacts on the economy"

by Nguyen Duy Manh, Data scientist senior

A l'invitation de **CAFESMINAR** et de l'Association **MCFV** (Mouvement des citoyens français d'origine vietnamienne),

**NGUYEN DUY MANH**, Ingénieur Polytechnique X2008, Data Scientist senior spécialisé dans le secteur bancaire, BNP Paribas fera une présentation en anglais sur le thème "Current state of AI technologies & their impacts on the economy".

La conférence sera en anglais.

**Résumé:** *Large language models with the example of ChatGPT have drawn massive attention from the public from all over the world, massive investments (tens of billions of dollars). AI technologies have become the focus point of the investment world after the collapse of major leading bitcoin platforms. The pace at which this specific line of AI technologies is getting commercial release is unprecedented while the regulation is just getting started. It has also drawn a lot of worries about the future of the economy, even fear of human extinction. As an experienced AI practitioner, especially in the banking sector, I will try to draw a brief picture of the current state of AI technologies and throw it under the lights of economic studies in order to evaluate its impact on the economy.*

### **Participer à la réunion Zoom (en anglais)**
